Burt:

I have a memo from Ralph's office, the substance of which is in the attached document. It has to do with the problem arising from the use of the 2300 cycle time marker for System 5.

Will you examine this problem and advise as to possible solutions. We propose to leave System 5 at the present location and definite plans exist to continue to use this system in the near future and probably until System 4 is completely operational. Consequently, there is urgent need to refine System 5 to the maximum extent available within the immediate future and with a minimum disruption to progress on System 4.

Thanks,

  
George
